Subject: Nuclear Waste Shipments thru Webster Grove, MO.

Part of Records Package / Supplement / Correction

Dear Sir or Madam:

I am sending this email to request postponement of the delivery of nuclear waste to the Yucca Mountains Site through the town of Webster Groves, Missouri. Undoubtedly, there are plenty of security measures at the Yucca Mountain site, to provide for terrorist acts or accidents that could befall that location. Unfortunately there is absolutely no way to safeguard this shipment. This shipment can not be protected the threat of terrorists, or sick minded people, or even just children putting things on the track to watch it get smashed by the passing trains or any other eventuality.

I live in the town of Shrewsbury, a neighboring town along the tracks. Our town will be effected by this train passing through whether there is an accident or not. Our close communities don't need the added aggravation and fear that this shipment will cause.

We are only in the planning stages of protection against any potential terrorist attacks. It is not the time to deliver a well publicized nuclear waste load that has the potential of effecting many American cities as much or more than the tragedy of September 11 of this year. Your consideration for the people of every city along the tracks is demanded.

We have just undergone two and a half weeks of fear and turmoil, and don't need or want anything else added to that. Please give us some peace of mind by delaying or canceling this shipment. If nuclear by-products can not be handled and stored on site, then the site should be closed for everyone's safety and peace of mind.

Sincerely,

William L. Bonfiglio
